## **Integrating Mindfulness Meditation into Inpatient Rehabilitation for Patients with Devastating Neurological Damage**

## **PRESENTER: Stephen Orr**

#### **INTRO:**

- Mindfulness meditation is the practice of focusing on your experiences (like your emotions, thoughts, and sensations) in the present moment.
- **Online mindfulness training has been shown to** improve attentional processing in traumatic brain injury patients.

#### **METHODS:**

- **1.** Study population: Patients in inpatient rehab with neurological damage
- 2. Patient groupings: 1) chronic pain, 2) mood, 3) trouble focusing
- 3. The free meditation app Insight Timer downloaded onto patients' phones
- 4. Patients meditate 10 minutes daily for duration of rehab stay

#### "How confident are you that RE guided meditations can reduce your need for pain medicine?" Recommend?

A free mindfulness app downloaded onto patients' smartphones can be used to deliver brief daily meditations to those recovering from neurological damage. Initial feedback suggests that meditation is a favorable addition to inpatient rehab.

Take a picture to download the mindfulness app!

### **ENROLLMENT STATISTICS:**

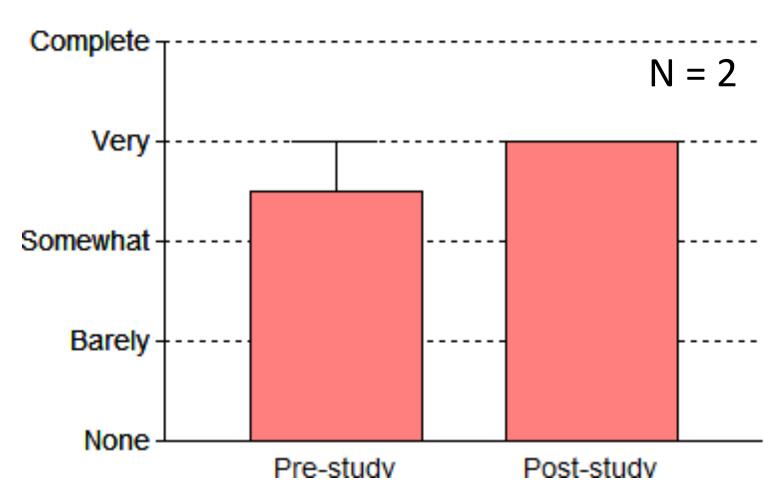

- **15 patients enrolled out of 47 approached**
- **Of the 32 patients not enrolled:**
- **20 lacked smartphone**
- 6 not interested
- **2** below cognitive threshold
- 1 lawyer's decision
- **Of the 15 patients enrolled:**
- 9 spinal cord injury, 2 traumatic brain injury, 2 stroke, 2 Guillain-Barre syndrome
- Chief complaint: 10 pain, 3 mood, 2 focus
- Average pre-study familiarity with mindfulness meditation was 1.88, corresponding to "barely familiar."

## **ADDITIONAL RESULTS:**

# Confidence that meditation can improve mood
